# Web Development 101

A guide by < Rathesh Prabakar >

### Self explosion

"Let yourself feel insecure from time, It will help you grow as an individual."

— Sundar Pichai

### 1. Agenda

→ Overview

Front end vs Back end.

- → **Dive into front end**Highlight what's new, tips, tools and frameworks.
- → Ocean of back end Give people a method to swim.
- Connecting the web Provide an unifying information for what is web and how it works.

### Front End Vs Back End

Me: What's in your screen?

You: What's happening behind your screen?

#### **Fact**

Catchy UI Catches people.

If front end is a heart, then backend is a brain.

**HTML**: Organizer

**CSS**: Stylist

JS: Multitasker

### Just one! Your favorite.

- React JS
- Angular JS
- Vue JS

#### **Tips**

Use Reddit channels

Read Mozilla docs

Educative.io

Frontend masters

Practice @freecodecamp

The logical area which enlighten the functionality of front end: Back end

#### Fact

Back end developer is so hot in the market, Highly paid job,

Front end + Back end = Full Stack

# Components of Back end

#### **Database Language**

- MySQL
- SQLlite
- Hybernite
- PostgreSQL

#### Server Language

- PHP
- Python
- Java
- Ruby
- Perl

#### **Server Framework**

- Laravel
- Django, Flask
- Spring
- Ruby On Rails

## Web Browser Vs Web Server

Chrome: I am the one who shows all the data.

Localhost: I am the one who processes the data.

#### Tips

While running localhost, use Incognito window.

Use client side for lighter process.

### **Short Tips**

#### → Front end

Github Education Pack

Freecodecamp (Responsive Web Design)

#### → Back end

Documentation, Reddit

Search on Medium (Projects)
